## The organometallic chemistry of the transition metals by robert h. crabtree

"an impressive book and compression. This review should be the size of the book to do full justice to all insights of this volume." —Journal of metals online fully updated and expanded to reflect recent progress, this fifth edition of the classic text provides professional students and chemists with a complete introduction to the general principles and properties of organometallic compounds, as well as practical information on reaction mechanisms and detailed descriptions of contemporary applications. with greater attention to organic synthesis applications, nanoparticles science and green chemistry, the fifth edition brings to date this vital resource. new to the fifth edition: chapters have been updated with relevant examples in the field, modern trends and new applications; the chapter of organic applications has been completely rewritten new end-of-chapter problems, along with their enhanced coverage solutions with developments in nanoparticle science greater attention to green chemistry an unparalleled pedagogical resource and a valuable work reference for professional chemists, with a complete coverage and updated information, students and researchers in organic and organometallic chemistry will address their organometallic chemistry of transition metals, fifth edition of which critical information robert crabtreefrsrobert crabtree at the royal society admissions day to london, July 2018bornrobert howard crabtree (1948-04-17) 17 April 1948 (age 73)London, inghilterra, uknationality united states and kingdom united education brighton collegealma mater university of oxford (BA) University of sussex (PhD)Known forcrabtree'sorganUniversity of Yale Institut de Chimie des Substances Naturelles Transitional Thesis Dinitrogen in Metal Adduction of complex complexesand basic character (1973)Consultant Joseph Chatt[Other academic consultants Malcolm GreenHugh Felkin [citation needed] Websitechem.yale.edu/people/robert-crabtree Robert Howard Crabtree FRS[1] (born 17 April 1948) is an American chemist. He is at the service of Whitehead Professor of Chemistry at Yale University in the United States. He is a naturalized citizen of the United States. [2] Crabtree is especially known for his work on the catalyst of Crabtree for hydrogenation, and his book on organometallic chemistry. [3] Education Robert Howard Crabtree studied at Brighton College (1959-1966), and graduated in arts from the University of Oxford where he was a student at New College in Oxford in 1970, studying under Malcolm Green. He received his Ph.D. from the University of Sussex in 1973, under the supervision of Joseph Chatt. [4] Career and research After his doctorate, he was a postdoctoral researcher with Hugh Felkin at the Institut de Chimie des Substances Naturelles in Gif-sur-Yvette, near Paris. He was a post-doctoral companion (1973-1975) and then an annexe de recherche (1975-1977). At the end of that time he was chargé de recherche. In 1977 Crabtree took a chair in Inorganic Chemistry at Yale University. He worked as an associate professor from 1982 to 1985, and as an ordinary professor from 1985 to the present.
