Artificial turf installation guide

Download Installation Guide Step 1 : Removing existing lawn Remove any lawn, rocks, sand etc. to a depth of 60mm. or 80-100mm if vehicles are going to be parked on the lawn. Hand tools are fine for removing lawn. For large areas a bobcat or dingo will be the best option. Once the area is dug out, use a rake and sand spreader to get approximate level and installing any necessary boarders. DON'T FORGET TO CAP OFF SPRINKLERS!! Step 2 : Install the base Once the area is flat and approximately level, fill with road base (e.g. crushed rock). Rake and spread using a sand spreader. Once it is all to approximate level, wet and compact using a plate compactor to ensure you have a hard base. The final step of installing the base is screeding for a perfectly level base for the lawn to be laid on. Using a screed bar and crusher dust (e.g. cracker dust) you will need to get the level depending on the pile of the lawn so the top of the lawn will sit flush with the kerb, boarder etc. and screed the whole area to the same level ensuring your levels are correct check every metre using a level. Once screeded. Wet and compact. Be careful not to wet the area too much as it will sink when you compact. Once the screed is compacted and hard you will need to do a second screed running your bar over the area taking out any compactor marks or filling in any dips. Step 3 : Installing all seasons synthetic turf perth Installing synthetic grass can be very difficult and technical. Depending on the shape, size and how many joins are needed. The fake turf has a grain and needs to be laid in a certain direction for it to look best. If joins are needed this is where things get a bit tricky. You'll need to ensure that at least 2 stitch lines are cut off each side of the lawn to make a unnoticeable join.Once all pieces are in place, join them up using synthetic turf joining tape making sure no grass fibres stick to the tape. Improper joining will result in an unsightly seam running down the length of your synthetic lawn. Once all pieces are joined and in place you will need to cut in all the edges using a Stanley knife, it is very important to change your blade very often to ensure you get a nice clean cut. For your copy of our installation sheet contact us All our Australian made synthetic lawns are available for self-installation, If you consider yourself a DIY enthusiast or would like to install your own synthetic lawn, then we have a complete DIY service. We can help with the design of your new lawn, including how much artificial turf you will need to purchase, as well as Ali edging, pegs, joining tape and specially formulated kiln dried sand together with installation guides and tips from a professional. Ali Edge Joining Tape Turf Pegs Turf Pegs II Turf Pegs III Installing artificial turf yourself at your home really couldn't be any easier, thanks to our DIY installation service. All it requires is a little preparation and some simple-to-follow instructions, and your new artificial turf is ready to enjoy. Plus, by choosing to install fake grass yourself, you'll also save money. Win-win! To help make your DIY turf installation look just as good as what the professionals do, we have the installation tools for hire! Our compactor and power brooms for hire will help you achieve the perfect installation of our artificial grass, to learn more or to hire contact us today! TigerTurf Installation VideoSheKnows TV: How to Install Synthetic Grass © 2004-2021 Copyright - Synthetic Grass Warehouse • 800.730.2675 • info@sgwcorp.com • Privacy Policy • Website Design by IDG Advertising We're here to guide you every step of the way and make sure your lawn looks great. Get in touch with us and we'll be happy to answer your questions and help you with the perfect installation.Step 1: PlanningPlanning your project is the most important step. You will need to work out how much artificial grass you'll need and which accessories you'll need.Artificial grass comes in either 2m or 4m widths, and lengths of up to 25m. The grass has a directional pile (which means all the blades lean to one side). When you roll out a piece of grass, the blades will either lean away from you or towards you, never left to right. For the optimum look, try to make sure the blades are leaning towards the house or seating area.So to plan this, you'll need to draw out a scale diagram of your garden. Use our helpful Planning Tool. Think about the layout of each roll of grass and draw rectangles for where they will go, onto your diagram.Once you have this you will know how many rolls you'll need and what their dimensions will be. You'll also see how many joins you'll have and how long they are, and you'll be able to work out your perimeter for edging.Step 2: Prepare what you'll needThe type and size of your installation will determine what exactly you may need. Some elements are optional and depend on personal preference, some are essential.ShovelSharp KnifeHammerBrushA straight piece of timber for smoothing out sandA wacker plate to compact the sand (larger areas)Sharp Sand or Grano (6mm to dust) – This will serve are the base for all installations on soil.Weed Membrane – We highly recommend that every outdoor installation uses Weed Membrane.Shockpad Underlay – This is optional, although recommended for all installations especially on concrete.Artificial Grass – either 2m or 4m rollsEither our Self Adhesive Joining Tape, or a Joining Kit consisting of Tubes or Tubes of Adhesive and Jointing Tape.Fixing PinsEdging – This is optional but is recommended for creating the perfect finish. There are a few types of edging to consider.Step 3: EdgesIf you want an extra neat finish to your project use one of our edging products. If you do this, you'll need to work out the perimeter of your installation first. Once you start digging out the soil, install the specific edging that you require. You can opt for no edging if you wish, and so you can skip this step, but you will need to securely fasten the perimeter with our Fixing Pins at the end.Step 4: Preparing the GroundYou will need to remove the top soil and dig to a depth of 35mm. Then, spread out the sharp sand or Grano over the area to create a neat flat finish. This is possibly the most essential step to get right. A neat flat sand layer will make all the difference.Step 5: Weed Membrane and UnderlayOnce the ground is flat lay out the Weed Membrane and Shockpad Underlay. Try to make sure that the Weed Membrane reaches all edges. The Shockpad underlay is often cut just before the perimeter to help securely fasten the edge.Step 6: Laying out the artificial grassThis is the easy bit. Simply line up the grass and roll it out. Then shuffle it around until it is in its final position.Step: 7 JointsYou will need to carefully connect any joins in your artificial grass. Line up the artificial grass and fold back the edges of the join. If you are using our Self-Adhesive Joining Tape, peel back the protective strip and place it on the ground, facing upwards and between the joins. Carefully fold back down the artificial grass and make sure the connection is seamless.If you are using Tubes/Tubs or Glue and Jointing Tape, do the same process but lay out the Tape on the ground and gently apply the adhesive so that it spreads over the Tape evenly.Step 8 Brush up and Enjoy!Brush back your new artificial grass lawn so that the blades are standing upwards. And then sit back and enjoy your garden!No Mowing. No Mud. More Fun. RRP £13.00 (inc. VAT) Now £7.80 / m2 (inc. VAT) View RRP £11.50 (inc. VAT) Now £6.00 / m2 (inc. VAT) View RRP £28.95 (inc.
